2 COMPANY PROFILE WELCOME TO SOLARIS

#### **PRODUCTS**

- 4 R&D BENCHTOP FERMENTERS/ BIOREACTORS
  - 6 10
- 14 JUPITER
- 26 | VENUS
- 36 ELARA ST
- 44 ELARA FLAT
- 52 GENESIS
- 60 | SINGLE USE FERMENTERS/ BIOREACTORS
- 68 PILOT AND INDUSTRIAL FERMENTERS/ BIOREACTORS
- 70 M SERIES
- 78 | S-I SERIES
- 96 PRODUCTS AND SERVICES
- 98 | PROCESS PLANTS
- 102 METIS GAS ANALYSER
- 104 | KRONOS TF FILTRATION
- 112 TYTAN
- 114 C.I.P. & S.I.P. SYSTEMS
- 116 | EDUCATION & TRAINING
- 117 FERMENTATION AND BIOTECH

**DEVELOPMENT** 

WELCOME TO SOLARIS Solaris is a dynmic company founded in 2002, with customers located around the globe. Our mission entails providing customers with innovative process solutions through carefully tailored products. We value close customer collaboration which helps maximize efficiency and thus return on investment.

Our customers range from startup labs, public and private R&D institutes, to well established manufacturers within the biotech, pharmaceutical, food&beverage industries. We offer technology at virtually every scale, allowing cutomers to grow within our offerings.

Solaris provides design and manufacturing expertise in many bioprocess disciplines. This gives unique capabilities associated with standalone systems, but also the ability to integrate process steps into complete turnkey plants. Our engineering, sales and support teams work closely with customers throughout project feasibility studies, engineering, manufacturing, installation, and thereafter with continued after-sales support.

Solaris products include fermenters, bioreactors, chemical reactors, gas analysers, CIP/SIP systems, upstream process systems, downstream tangential flow filtration systems (microfiltration, ultrafiltration, nanofiltration, reverse osmosis) and more.

Solaris' headquarters and production facilities are located in the northern Italian region of Lombardy, with local representation in more than 40 countries worldwide.

# R&D BENCHTOP FERMENTERS/BIOREACTORS

Solaris benchtop fermenters and bioreactors offer efficient platforms for R&D and product development applications. These systems are designed to be straight forward yet extremely flexible, offering a multitude of options. Benefits include compact and user-friendly designs, integration of state of the art components and ancillary technology, a powerful and intuitive parallel software platform, up to date and open communication protocols, and Benchtop systems are available in autoclave, single use and/or SIP vessel platforms, and configurable for each application and organism. These systems are also designed to easily scale to pilot and industrial platforms.

**ELARA FLAT** 

**GENESIS** 

**BLACKJAR & BLACKBOX** 

# SINGLE & PARALLEL MINI FERMENTERS/BIOREACTORS

# 10

**IO**, the smallest scale Solaris platform, offers 200 ml and 1000 ml total volume autoclavable vessel sizes. The system utilizes innovative Leonardo software, capable of managing up to 24 systems in parallel.

**IO** typical applications includes the following:

Education & Basic research

Scale-up and scale-down studies

Process development and optimization

IO can be used for:

Biopharmaceutical

Biofuels

Food industry

Bioremediation

Bioplastic

Cosmeceutical

Nutraceutical

Fast and accurate thermoregulation without water circulation

# SINGLE & PARALLEL MINI FERMENTERS/BIOREACTORS

#### **Benefits**

Up to 24 units managed with one HMI with innovative PARALLEL process control LEONARDO: smart controller designed to provide an high level of automated management of the fermentation/cultivation processes

Batch, Fed batch or continous processes

Different gas mixing strategies with up to 5 TMFC

AIR

OZ

OZ

NEV

Sparger

NRV

Remote control via PC, tablet and smartphone for process management and after sale assistance

24" HMI

Powerful/ Accurate **brushless motor**, from 1 to 2000 RPM. Online absorbed Torques (Nm) and Power (W) measurements obtaining an indirect density indication of the culture broth

Modbus Digital sensors

LEDA safe sterile sampling system

The needle free connector is designed to reduce the risk of contamination during sampling.

The sterile combination of a syringe (3-5-10-30 ml) and a non return valve guarantees the sterility after sampling until the next use.

Additional parameter in modular external boxes for future PCS upgrade Including dCO<sub>2</sub>, cell density, weight, peristaltic pumps, ect

Weight Stay 1992

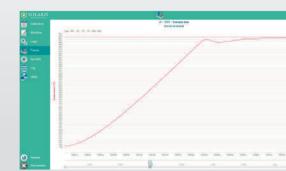

Cell Density Sections

Cell Consists

Scientist

N.4 assignable Watson Marlow pumps in entry level

No water circulation:
Thermoregulation performed
through Peltier cell

# Modbus Digital sensors

#### Why a digital sensor?

Digital sensors (including Cell Density products) have been integrated to the Solaris PCS and Leonardo controlling software, giving the user many benefits over traditional analog sensor outputs. Such benefits include a robust communication protocol not susceptible to signal loss, in-software sensor diagnostic information, parallel calibration/batch calibrations and more.

Reducing background noise

## Smart PCS

Solaris new modular product design strategy decreases time to market and the number of unique parts in the product architecture, increasing the number of product variants. The result is a lean, flexible and smart PCS, which can be stacked in case of parallel processes through a dedicated support.

Additional parameters in modular external boxes for future PCS upgrade including dCO<sub>2</sub>, Cell Density, Weight, Peristaltic pumps, ect.

## Leonardo 3.0

#### **USER-FRIENDLY SOFTWARE**

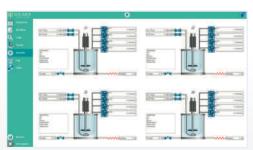

Solaris controlling software offers a simply laid out, yet powerful platform for experimental design planning and process control. The graphical user interface enables the intuitive selection and adjustment of control functions.

Extracted data is compatible with Window Excel but, in addition, Solaris offers a platform where fermentation data can be easily exported in real time and thus managed. This software is included in the supply and can be installed on an unlimited numer of the client's PC or laptops.

#### Do it parallel: smarter..faster

Leonardo allows intuitive and time-saving parallel operations. Up to 24 indipendent fermentations/cultivations can be carried out simultaneously.

Parallel synoptic.

#### Do it wireless!

Increase mobility: users have the option to access the platform remotely, via PC, tablet, phone. Remote access is multi-level password protected.

# SINGLE & PARALLEL FERMENTERS/BIOREACTORS JOPITER

The **JUPITER** platform offers multiple autoclavable vessel sizes and designs from 2 up to 10 L total volume. Various aspect ratios and thermoregulation designs are also available. The system is highly configurable, built with high quality components, and offered at a competitive price with no strings attached.

Jupiter is available both jacketed and single-wall (**Jupiter SW**).

JUPITER typical applications includes the following:

Education & Basic research

Scale-up and scale-down studies

Process development and optimization

#### JUPITER can be used for:

Biopharmaceutical

Biofuels

Food industry

Bioremediation

Bioplastic

Cosmeceutical

Nutraceutical

Parallel control up to 24 units

In addition to control parameters available in standard benchtop systems, the **Venus** platform offers the additional capability of Pressure Control.

In many fermentation product development cycles, over pressurization control is enabled only at pilot plant scales. Utilizing pressure control at the benchtop scale allows this parameter to be studied and better optimized, aiding considerations to gas mass transfer management when scaling up.

Venus greatly adds efficiency to the appropriate product development application.

**VENUS** typical applications includes the following:

Education & Basic research

Scale-up and scale-down studies

Process development and optimization

**VENUS** can be used for:

Biopharmaceutical

Biofuels

Food industry

Bioremediation

Bioplastic

Cosmeceutical

Nutraceutical

Pressure controlled

Removable jacket before autoclaving:

Lighter & Handling Improved heat transfer

up to 2 bar

Higher oxygen transfer

# AUTOCLAVABLE PRESSURE CONTROLLED FERMENTERS/BIOREACTORS

## Leonardo 3.0

#### **USER-FRIENDLY SOFTWARE**

Solaris controlling software offers a simply laid out, yet powerful platform for experimental design planning and process control. The graphical user interface enables the intuitive selection and adjustment of control functions.

Extracted data is compatible with Window Excel but, in addition, Solaris offers a platform where fermentation data can be easily exported in real time and thus managed. This software is included in the supply and can be installed on an unlimited numer of the client's PC or laptops.

Parallel synoptic

#### Do it parallel: smarter..faster

Leonardo allows intuitive and time-saving parallel operations. Up to 24 indipendent fermentations/cultivations can be carried out simultaneously.

#### Do it wireless!

Increase mobility: users have the option to access the platform remotely via PC, tablet, phone. Remote access is multi-level password protected.

## Smart PCS

Solaris new modular product design strategy decreases time to market and the number of unique parts in the product architecture, increasing the number of product variants. The result is a lean, flexible and smart PCS, which cn be stacked in case of parallel processes through a dedicated support.

Additional parameters in modular external boxes for future PCS upgrade including dCO<sub>2</sub>, Cell Density, Weight, Peristaltic pumps, ect.

**ELARA ST** photobioreactor series is ideal for phototrophic organisms such as moss, microalgae, bacteria and plant cells. The light spectrum and intensity is adjustable 0-100% up to 3000 µmol(photon)/m2.

ELARA ST typical applications includes the following:

Education & Basic research

Scale-up and scale-down studies

Process development and optimization

ELARA ST can be used for:

Algae

Phototrophic bacteria

Plant cells

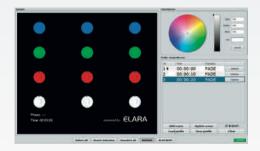

High power
LED lighting,
spectrum selectable
and
dimmable 0-100%

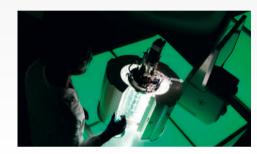

# STIRRED AUTOCLAVABLE PHOTOBIOREACTORS

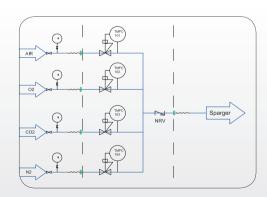

# **ELARA** ST

#### **Benefits**

Different gas mixing strategies with up to 5 TMFC

intensity and circadian cycle simulation Powerful/ Accurate brushless motor, from 1 to 2000 RPM. Online absorbed Torques (Nm) and Power (W) measurements obtaining an indirect density indication of the culture broth. Modbus Digital sensors

Automatic and manual control of RBW light

LEDA safe sterile sampling system
The needle free connector is designed to reduce the risk of contamination during sampling.

The sterile combination of a syringe (3-5-10-30 ml) and a non return valve guarantees the sterility after sampling until the next use.

Safety: pressure relief valve included in each unit.

Compact and modular PCS

N.4 assignable Watson Marlow pumps in entry level

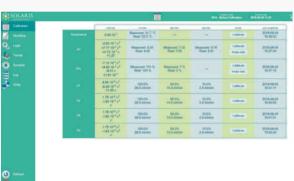

Additional External modular box:
OD, dCO2, weight, thermobox, peristaltic pumps

Fully removable and cleanable jacket

# Modbus Digital sensors

#### Why a digital sensor?

Digital sensors (including Cell Density products) have been integrated to the Solaris PCS and Leonardo controlling software, giving the user many benefits over traditional analog sensor outputs. Such benefits include a robust communication protocol not susceptible to signal loss, in-software sensor diagnostic information, parallel calibration/batch calibrations and more.

#### **GAS MIXING**

Hardware and software adaptability are key to enable the best aeration strategy for each process. Thermal mass flow controllers (TMFC) allow precise flow rate control of individual gasses. Up to 5 TMFC's can be configured within each PCS cube and integrated to the controlling software. The powerful software and control platform allows precise cascade adjustment of multiple parameters to manage gas transfer, OTR, kLa, etc.

- n.1 TMFC included in "entry" level system; additional available as optional.
- Various agitator and baffle designs available
- Automatic gas mixing algorithms
- Toro, sintered and other spargers available

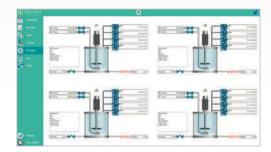

#### **USER-FRIENDLY SOFTWARE**

Solaris controlling software offers a simply laid out, yet powerful platform for experimental design planning and process control. The graphical user interface enables the intuitive selection and adjustment of control functions. Extracted data is compatible with Window Excel but, in addition, Solaris offers a platform where fermentation data can be easily exported in real time and thus managed. This software is included in the supply and can be installed on an unlimited numer of the client's PC or laptops.

#### Do it parallel: smarter..faster

Leonardo allows intuitive and time-saving parallel operations. Up to 24 indipendent fermentations/cultivations can be carried out simultaneously.

#### Do it wireless!

Increase mobility: users have the option to access the platform remotely via PC, tablet, phone. Remote access is multi-level password protected.

dimmable 0-100%

Higly resistant to salty water

# PHOTOBIOREACTORS

#### **Benefits**

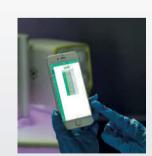

Up to 24 units managed with one HMI with innovative PARALLEL process control LEONARDO: smart controller designed to provide an high level of automated management of the fermentation/cultivation processes

Batch, Fed batch or continous processes

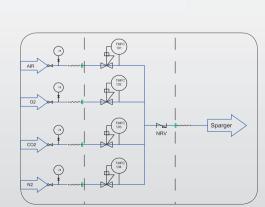

24" touch HMI.

Remote control via PC, tablet and smartphone for process management and after sale assistance

Airlift mixing process
Different gas mixing
strategies with
up to 5 TMFC

Assymetric shape to prevent foam formation

Homogeneous light distribution
Automatic and manual control of light
intensity and circadian cycle simulation

Modbus Digital sensors

Safety: pressure relief valve included in each unit.

Compact and modular PCS

N.4 assignable Watson Marlow pumps in entry level

Additional External modular box:
OD, dCO2, weight, thermobox, peristaltic pumps

Parts in contact with the culture made in borosilicate glass and Super duplex SAF 2507 highly resistant to salty water

#### HOMOGENEOUS LIGHT DISTRIBUTION

The innovative flat design allows a homogenueous light distribution,

Parts that are product contacting are made from borosilicate glass and Super duplex SAF 2507, for compatibility with high

#### ASYMMETRICAL SHAPE

The asymmetrical shape is highly effettive fro the management

#### MODBUS DIGITAL SENSORS

Digital sensors (including Cell Density products) have been integrated to the Solaris PCS and Leonardo controlling software, giving the user many benefits over traditional analog sensor outputs. Such benefits include a robust communication protocol not susceptible to signal loss, in-software sensor diagnostic information, parallel calibration/batch calibrations and more.

The Flat system utilizes an airlifting design allowing gentle mixing and ensuring efficient homogenization.

Hardware and software adaptability are key to enable the best aeration strategy for each process. Thermal mass flow controllers (TMFC) allow precise flow rate control of individual gasses. Up to 5 TMFC's can be configured within each PCS cube and integrated to the controlling software. The powerful software and control platform allows precise cascade adjustment of multiple parameters to manage gas transfer, OTR, kLa, etc.

The **GENESIS** series offers a transitional system for scaling from benchtop to SIP systems.

Available in sizes from 7.5 to 20 L total volume, Genesis is meant to offer a SIP platform, on the benchtop space. Sterilization can be achieved via steam or alternatively by electric heaters.

**GENESIS** is an ideal partner for microbial fermentation as well as animal, plant and insect cell cultivation.

Typical applications includes the following:

Education

Basic research

Scale-up and scale-down studies

Process development and optimization

#### **GENESIS** can be used for:

Biopharmaceutical

Biofuels research and manufacturing

Vaccines

Food and beverage biotechnologies

Bioremediation

Bioplastics

Cosmeceutical

Nutraceutical

Automatic sterilization through electrical heaters (no need for an external steam source) or by steam

# Powerful/ Accurate **brushless motor**, from 1 to 2000 RPM. Online absorbed Torques (Nm) and Power (W) measurements obtaining an indirect density indication of the culture broth. **Benefits** Sampling system Illuminated side glass Modbus Digital

Different gas mixing strategies with up to 5 TMFC

External additional boxes parameters for future PCS upgrade including dCO<sub>2</sub>, Cell Density, Weight, Peristaltic pumps, ect

Compact and modular PCS

#### Double jacket (side-bottom)

Increased heat transfer efficiency
It ensures optimal temperature
control and sterilization even at
minimum volumes

Harvest valve in entry level optionally SIP

# Chiller

- Optionally GENESIS can be equipped with a chiller for heat removal from your culture minimizing lab water usage
- Using this system you don't need a water supply line in your lab
- Cost-effective cooling of fermenters
- Easy operation
- Refregerant level monitoring

Chiller data sheet	
Working temperature range	-10°C / +40°C
Temperature stability	±0.5
Power consumption	0.7 kW
Filling volume range	2-8 L
Cooling output at 20°C measured with ethanol	0.25-0.60 kW
Cooling output at 10°C measured with ethanol	0.20-0.50 kW
Cooling output at 0°C measured with ethanol	0.15-0.36 kW
Cooling output at -10°C measured with ethanol	0.09-0.15 kW
Pump pressure max.	0.35-1.30 bar
Pump flow max.	16-35 L/min.

# SINGLE USE FERMENTERS/BIOREACTORS

# BLACKJAR & BLACKBOX

BlackJar vessels: configurable and customizable pre-sterilized single use ridged wall bioreactors and fermenters.

BlackBox - Solaris single use PCS, parallel process control platform.

The BlackBox PCS offers a versatile and powerfull platform for single use systems. There are multiple configurations available for various process sensor outputs, thermoregulation and agitator connectivity, etc. BlackJar offers standard and customizable fermentation and cell culture configurations. BlackBox and BlackJar are compatible with any SU platform, but offer the most versatility in conjunction with each other.

#### **Benefits**

- Eliminate cross contamination risk
- Drastically shorten turnaround time between runs
- Integration of Hamilton digital communication as optional
- Flexible PCS I/O design for many vessel sensor configurations

BlackJar vessel series customizable SUB & SUF

BlackBox unique PCS for single use

Do it single use & DO IT FLEXIBLE!

BlackJar & BlackBox the combined solution

BlackJar vessels are customizable, pre-sterilized, single-use, ridged wall bioreactor/fermenter vessels available in a range of sizes from 50 ml to 30 L.

#### Materials

Polycarbonate and Nylon materials

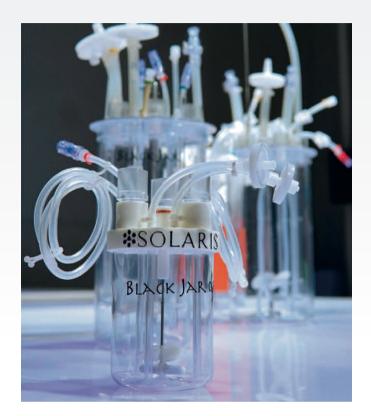

#### Sterilization and Validation

SU components are sterilized via high precision E-beam irradiated in dual polyester foil bags. Media contact materials are ISO10993, USP class VI.

#### Benefits

- Single Use bioreactor and fermenter vessels available in 500 ml, 3.2 L, 5.7 L, 30 L, and other total volumes.
- Option to fully customize head plate configuration, impellers, spargers, thermoregulation system, sensors, etc.
- Standard SU bioreactor (SUB) and SU fermenter (SUF) configurations available.
- Many PG 13.5 head plate ports.
- Optional customer preferred dO2 and pH single use sensors integrated and pre-sterilized.
- Single use optical dO2 solution available.
- Long silicon tubing for head plate inlets and outlets.
- · Adaptation to any agitator motor.
- Head plate drive or magnetic bottom drive agitator options available.
- Adaptation to any thermoregulation system, electric or liquid jacket.
- Utilization of the best polycarbonate materials pre-sterilized via e-beam radiation.

# BLACKBOX

## BlackBox

#### Unique Process Control System (PCS) for single use

BlackBox is a highly adaptable single use Process Control System (PCS) with a flexible In/out design.

The **BlackBox** PCS offers a versatile and powerful platform for single use systems. There are mutiple configurations available for various process sensor outputs, thermoregulation and agitator connectivity.

**BlackBox** is compatible with any SU vessels on the market like BioBLU®, UniVessel®, CellReady®, etc., but most flexible in conjunction with BlackJar.

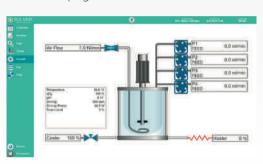

## Leonardo 3.0

#### **USER-FRIENDLY SOFTWARE**

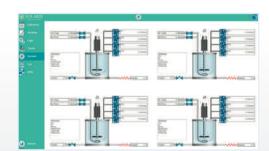

Solaris controlling software offers a simply laid out, yet powerful platform for experimental design planning and process control. The graphical user interface enables the intuitive selection and adjustment of control functions. Extracted data is compatible with Window Excel but, in addition, Solaris offers a platform where fermentation data can be easily exported in real time and thus managed. This software is included in the supply and can be installed on an unlimited numer of the client's PC or laptops.

Workflow page

Synoptic page top agitation

Parallel synoptic

#### Do it parallel: smarter..faster

Leonardo allows intuitive and time-saving parallel operation. Up to 24 indipendent fermentation/cultivations can be carried out simultaneously.

#### Do it wireless!

Increase mobility: users have the option to access the platform remotely, via PC, tablet, phone. Remote access is multilevel password protected.

# PILOT AND INDUSTRIAL FERMENTERS/BIOREACTORS

Solaris' pilot and industrial scale fermenters and bioreactors have been designed to simplify scale-up related challenges. "Standard" systems can be tailored via a moltitude of components and ancillary equipment options.

Solaris also specializes in fully customized systems, built to work within a broad range of applications. Customized vessels designs, associated skids, impeller configurations, communication and connectivity protocols, etc. are all available

Systems are designed for in situ sterilization, configured to the application, and can be managed atomatically through the controlling software. Full cGMP validation and supporting documentation packages are available and specified per each application's regulatory needs.

Systems are configurable for each application and organism, and offer continuity from smaller scale platforms.

# STANDARD STERILIZABLE IN PLACE SOLUTIONS

M series bioreactors and fermenters are Solaris' "standard" pilot plant scale platforms. There are 6 available standard vessel sizes ranging from 30 up to 200 L total volumes, completely configurable with an extensive range of options and accessories.

M Series typical applications includes the following:

Scale-up and scale-down studies

Pilot plant

Small productions

M series can be used for:

Biopharmaceutical

Biofuels

Food industry

Bioremediation

Bioplastic

Cosmeceutical

Nutraceutical

M Series
your
scaling up
guide

TK connection rather than TC ensures a better cleanibility and easier sterilization

Re-sterilizable addition system (steam bridge)

Multiple sensors options pH, dO2, Redox, Total Cell density, Viable Cell density, Conductivity, dCO2

### Double jacket (side/bottom)

Increased heat transfer efficiency It ensures optimal temperature control and sterilization even at minimum volumes

**Top agitation,** accurate **brushless motor**, from 1 to 2000

Online absorbed Torques (Nm) and Power (W) measurements obtaining an indirect density indication of the culture broth.

Tri-Clamp stainless steel piping cGMP designed to provide a smooth, and noncontaminating environment. Provides leak-tight connections and it is flexible and adaptable to other forms of piping.

SOLARIS

19" coloured touch screen industrial HMI SBC16: smart controller designed to provide an high level of automated management of the fermentation/ cultivation processes Customizable PID or factory default

Separate drains cooling return, condense to waste, hot condense return

Compact design

# Modbus Digital sensors

# Why a digital sensor?

Digital sensors (including Cell Density products) have been integrated to the Solaris PCS and Leonardo controlling software, giving the user many benefits over traditional analog sensor outputs. Such benefits include a robust communication protocol not susceptible to signal loss, in-software sensor diagnostic information, parallel calibration/batch calibrations and more.

# Gas mixing

Hardware and software adaptability are key to enable the best aeration strategy for each process. Thermal mass flow controllers (TMFC) allow precise flow rate control of individual gasses. Up to 5 TMFC's can be configured within each PCS cube and integrated to the controlling software. The powerful software and control platform allows precise cascade adjustment of multiple parameters to manage gas transfer, OTR, kLa, etc.

- n.1TMFC included in "entry" level system; additional available as optional
- Various agitator and baffle designs available
- Automatic gas mixing algorithms
- Toro, sintered and other spargers available

### **USER-FRIENDLY SOFTWARE**

Solaris controlling software offers a simply laid out, yet powerful platform for experimental design planning and process control. The graphical user interface enables the intuitive selection and adjustment of control functions.

Extracted data is compatible with Window Excel but, in addition, Solaris offers a platform where fermentation data can be easily exported in real time and thus managed. This software is included in the supply and can be installed on an unlimited numer of the client's PC or laptops.

# Set up your M series

Solaris' S and I SERIES systems offer tremendous flexibility within pilot-production scale fermenter and bioreactor systems. Each S/I Series project is tailor-made for the complexities associated with each application. The Solaris industrial team closely collaborates with the client's design and engineering contacts to ensure all specifications are best suited for each process. Up to 30.000 L vessels and beyond - Solaris offers tailored, turn-key pilot and industrial scale systems.

100%

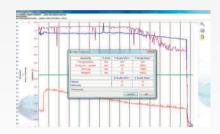

# SBC-16

- Customizable vessels from 5L to > 30.000 L
- Configurable instrumentation for control and/or measurement, including pH, dO<sub>2</sub>, CO<sub>2</sub>, RPM, gas flow rates, temperature, antifoam, cell density (total and viable cells), weight, redox, conductivity, level, agitation, and much more. New and custom sensors are welcome.
- SCADA Control System SBC-16.
- Software management of data and trends.
- Configurable for microbial or cell culture applications; batch, fed-batch or continuous processes.
- Extensive range of accessories and ancillary equipment.

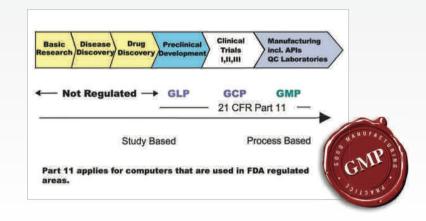

Smart controller for pilot and industrial plants. The SBC-16 system provides highly configurable automatic and manual management of fermentation/cell cutlure processes.

Each system is completely assembled and tested at the factory prior to installation. The units are then reassembled and retested after delivery to their final location. Systems are provided with a measurement and control system based on a SCADA supervisory platform connected through Ethernet and PLC. The SBC-16 software provides highly configurable automatic and manual management of fermentation/cell culture processes. The system is in accordance with CFR 21 Part 11.

# GMP customized solutions

For GMP applications, Solaris offers compact solutions with an array of automation techniques for operability. Only top quality stainless steel is utilized, which undergoes the highest quality finishing available. Options include ancillary systems like steam bridge diaphragm valve groups, helping guarantee sterility during inoculation, sampling, harvesting, feeding, etc.

The system is also designed ergonomically such that operating procedures and maintenance can be performed efficiently.

# PRODUCTS AND SERVICES

Atmospheric, over-pressure and vacuum tanks. Exceptional finishing by various methods of polishing guaranteed. Expertise in other equipment including: heat exchangers, mixing tanks, chemical reactors, customized systems, etc.

PED, ATEX, SVTI, ASME, etc. certifications available.

 $O_2$  concentration in the sample is measured by means of a transducer based on the zirconium dioxide properties of this gas, whereas  $CO_2$  determination is based on the measurement of absorption of infrared (IR) radiation. SOLARIS METIS GA is equipped with an inlet line selector (multiplex) that allows the unit to be connected with up to 8 fermenters/bioreactors.

The concentration values of two gases are visualised on the monitor, analysed and represented graphically ON LINE, with subsequent calculation of the respiration coefficient.

- Acquisition of data in real time and conversion of the signals from the sensors applied to the process into values expressed in the specific units of measurement of each variable.
- Continuous graphic representation of the behaviour of  $O_2$ ,  $CO_2$ , OUR, RQ, with possibility of changing configuration, scale, dynamic zoom and exporting graphs on a printer.
- Channel Configuration with possibility to set the reading parameters of gas to analyse.
- Probe Calibration
- Temperature Compensation

• Calculation of: OUR (Oxygen Uptake Rate)

CER (Carbon Dioxide Evolution Rate)

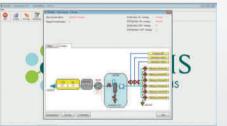

RQ (Respiratory Quotient)

The Solaris METIS Gas Analyser is a combined CO2 and O2 analyzer, specifically designed for cutlivation processes.

 ${\rm O_2}$  and  ${\rm CO_2}$  are the most frequently measured off gasses for process characterization and control (metabolism, substrate utilization, etc.). The measuring ranges of the METIS Gas Analyser are:  $0 \div 10$  or 15% for CO2,  $21 \div 10\%$  for O2. The system is based on well-proven, high quality transducers, and is designed with an extremely small internal volume, reducing overall response times.

Typical applications includes the following: Basic research

Scale-up and scale-down studies
Process development and optimization

KRONOS can be used for:

Biopharmaceutical

Biofuels research and manufacturing

Vaccines

Food and beverage biotechnologies

Bioremediation

Bioplastics

Cosmeceutical

Nutraceutical

# **Flexibility**

he best membrane for each separation process

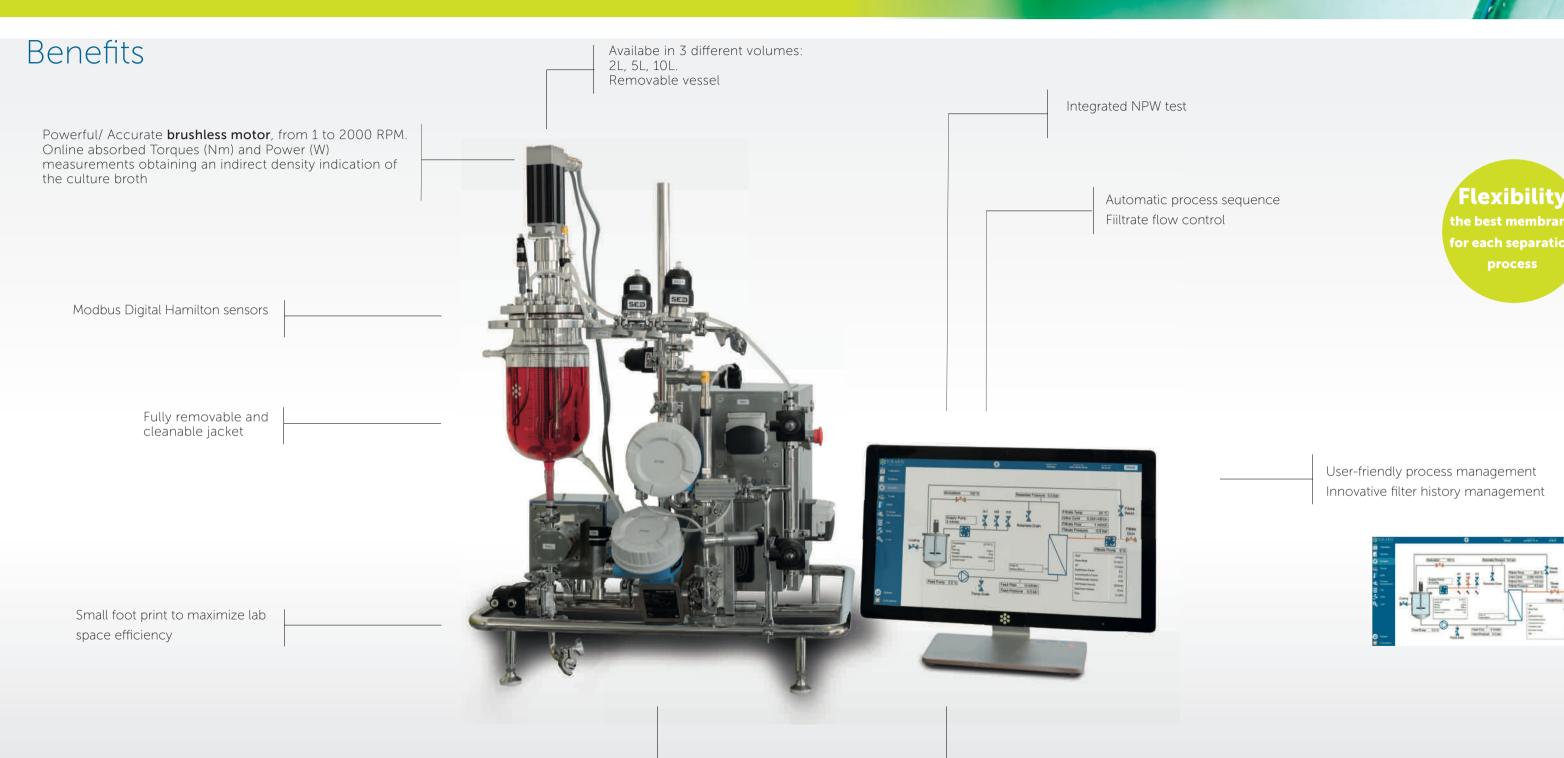

# AUTOMATIC AND FLEXIBLE TANGENTIAL FLOW FILTRATION SYSTEM

Safety: pressure releaf valve

included in each unit

Remote access via PC, tablet/smartphone Remote control for after sale assistance

# AUTOMATIC AND FLEXIBLE TANGENTIAL FLOW FILTRATION SYSTEM

# Flexibility

Kronos can be equipped with various membrane types (hollow fiber, cassettes, ceramic) and is designed following the criteria of cGMP.

The included PLC based controller provides all functionality for parameter measurement and process control. The hardware layout is designed such that sensors, pumps, recirculation vessels, valves, etc., are conveniently located for operation and turn-around.

Solaris can assist in evaluating the best membrane for each application in terms of material, geometrical configuration, and working parameters to:

- minimize shear
- avoid the "gel" layer problem
- increase diafiltration efficiency

# Modbus Digital sensors

# Why a digital sensor?

Digital sensors has been integrated to the Solaris PCS and controlling software giving the user many benefits over traditional analog sensor outputs. Such benefits include a robust communication protocol not susceptible to signal loss, in-software sensor diagnostic information, parallel calibrations/batch calibrations and more.

# DOWNSTREAM EQUIPMENT

Solaris offers expertise in scale-up pilot and industrial scale TFF applications. Tytan series tangential flow filtration systems are tailored to each application by:

- utilizing the optimal membrane material
- optimizing flow path dimensions
- utilizing the best components and controlling parameters for each process

Solaris' approach to TFF technology aims to be in lock step with each customer's cost/profit analysis.

# TYTAN series

The **TYTAN** series is based on Microfiltration and Ultrafiltration techniques and operates in the low pressure range of 1-5 bar.

Available membranes:

- spiral wound
- hollow fiber
- cassettes
- tubular ceramic

# C.I.P. & S.I.P. SYSTEMS

Solaris manufactures C.I.P. / S.I.P. SYSTEMS for repeatable processes under the strong hygienic regulations demanded by the pharmaceutical, biotechnology, food, diary and beverage industries.

Single or Multi-tank configurations are available; multi tank configurations offer independent vessels for water of different quality, like deionized water (DI), hot or cold water for injection (WFI), reverse osmosis water (RO), etc. Cyclical controller and software sequences are available (e.g. wash down rinse, acid wash, alkaline wash, wash down, final wash). Systems are capable of fully automatic or manual operations.

compressed air), etc.

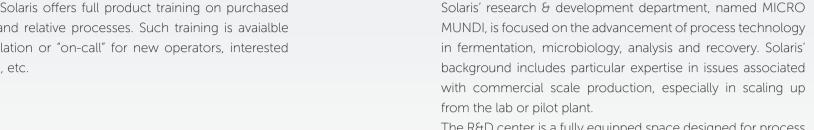

# FERMENTATION AND BIOTECH DEVELOPMENT

Solaris offers in-house training in various bioprocessing related disciplines. Such courses and programs can be tailored to the individual group's needs, with focus on relative theory and hands-on experience. Topics can include fermentation/cell culture procedural best practices including setup and process procedure, theoretical process understanding, component/ equipment training, etc.

Many research institutions and startups have also utilized Solaris's available lab space for initial process testing - greatly assisting their eventual product selection, configuration, customization, etc. Such efforts are collaborative and can be executed by Solaris' technicians or by the party in interest.

In the field, Solaris offers full product training on purchased equipment and relative processes. Such training is available during installation or "on-call" for new operators, interested

stakeholders, etc.

development. Available equipment ranges from benchtop to pilot scale, encompassing 4 major areas:

- 1. Strain screening and selection
- 2. Fermentation
- 3. Downstream processing
- 4. Analytical development

The development of technologies is based on:

- 1. Strain selection, maintenance and improvement
- 2. Consideration to metabolic, chemical and physical parameters useful to optimization.

Solaris extensive experiences in the development of strictly confidential technologies. These projects were treated such The R&D center is a fully equipped space designed for process that all biological and intellectual results were and remain the property of the client. Micro Mundi resources have been utilized in fields such as:

- Classical fermentation (API, anti-tumorals, vitamins, etc)
- Biofuel production
- Cell plant fermentation
- Bioremediation
- Mammalian cell culture

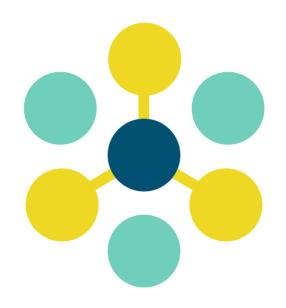

MICRO MUNDI's staff offers a wealth of experience ranging from process engineer to various fields of research science within the biotechnology, pharmaceutical and F&B industries. This experience enables Solaris to be a trusted partener in the implementation of development or improved technologies.
